# Why Semaphore AssetsAdm ?

AssetsAdm - a software built on Cloud technology that encompasses the optimal life cycle management of assets maintenance, audit, tracking and document management via web and mobile apps.

It enables organisations with insights for implementing various maintenance strategies such as time-based preventive maintenance, condition-based maintenance, and predictive maintenance using remote monitoring to improve product uptime.

Companies can lower the cost of ownership by reducing costly repairs, increasing the product lifecycle, and improving product performance.

It provides easy access to complete product service history, warranty and contract entitlements, maintenance events, and product usage & conditions helps protect assets, increase equipment life time & improve system reliability.

AssetsAdm provides a platform for centralized data monitoring it covers tracking, transfer, sale, operations, repairs, maintenance, insurance, amortization, condemnation, replacement, upgrade and disposal.

By analysing the data, asset managers can determine each asset's Total Cost of Ownership. They can highlight if owning an asset outweighs the total running and maintenance costs. Making it easier to decide when, or if, an ageing asset should be replaced or disposed. It aligns resources with the business objectives, by reducing investment on technology and increasing return on investment.

## Maintenance management facility

AssetsAdm provides opportunity to reduce downtime and maintenance backlog with all the real-time performance data like total usage and scheduled maintenance. The latter being essential for avoiding unplanned downtime, which is costly for business operations and revenue, some of the key features.

### Streamline

Streamline all maintenance activities and processes.

Streamline workflow by improving MTBF and MTTR.

### Improve

Grow maintenance program to generate revenues.

Access maintenance data and manage processes online anytime anywhere.

### Reduce

Reduce excessive expenditure on equipment procurement and maintenance.

Lower Total Cost of Ownership for products.

### Grow

Gain actionable insights to drive product and service quality.

Improve technician productivity and utilization.

## **Service request and Work order facility**

Admin team can track the movements of technicians all the way through the work orders, scanning the QR code service technician can view the asset details and related work order, tasks assigned to him quickly.

- Control over Technicians
- Easy retrieval of Work Order
- Easier asset identifications , Reminders & Escalations
- Service level Arrangement with suppliers and technicians for high productivity and high quality output

Oversee work orders and notifications, track actions and service request option with approval according to the hierarchy of authority.

## **Assets Tracking, Audit and verification using RFID/Barcode**

Assets can be controlled better with RFID it gives a better and increased visibility into their location and reduces the cost of replenishing stolen, lost or broken items. Improved visibility also leads to better asset allocation and utilization, decreasing unnecessary inventory and lowering capital costs.

Organisations have to fulfil with audits of their IT and non-IT assets and equipment. Operational efficiency is enhanced by completing wall-to-wall inventory audits quickly and accurately, spending little or no time in settlement. With a single mouse click, accurate compliance reports are provided to concerned department.

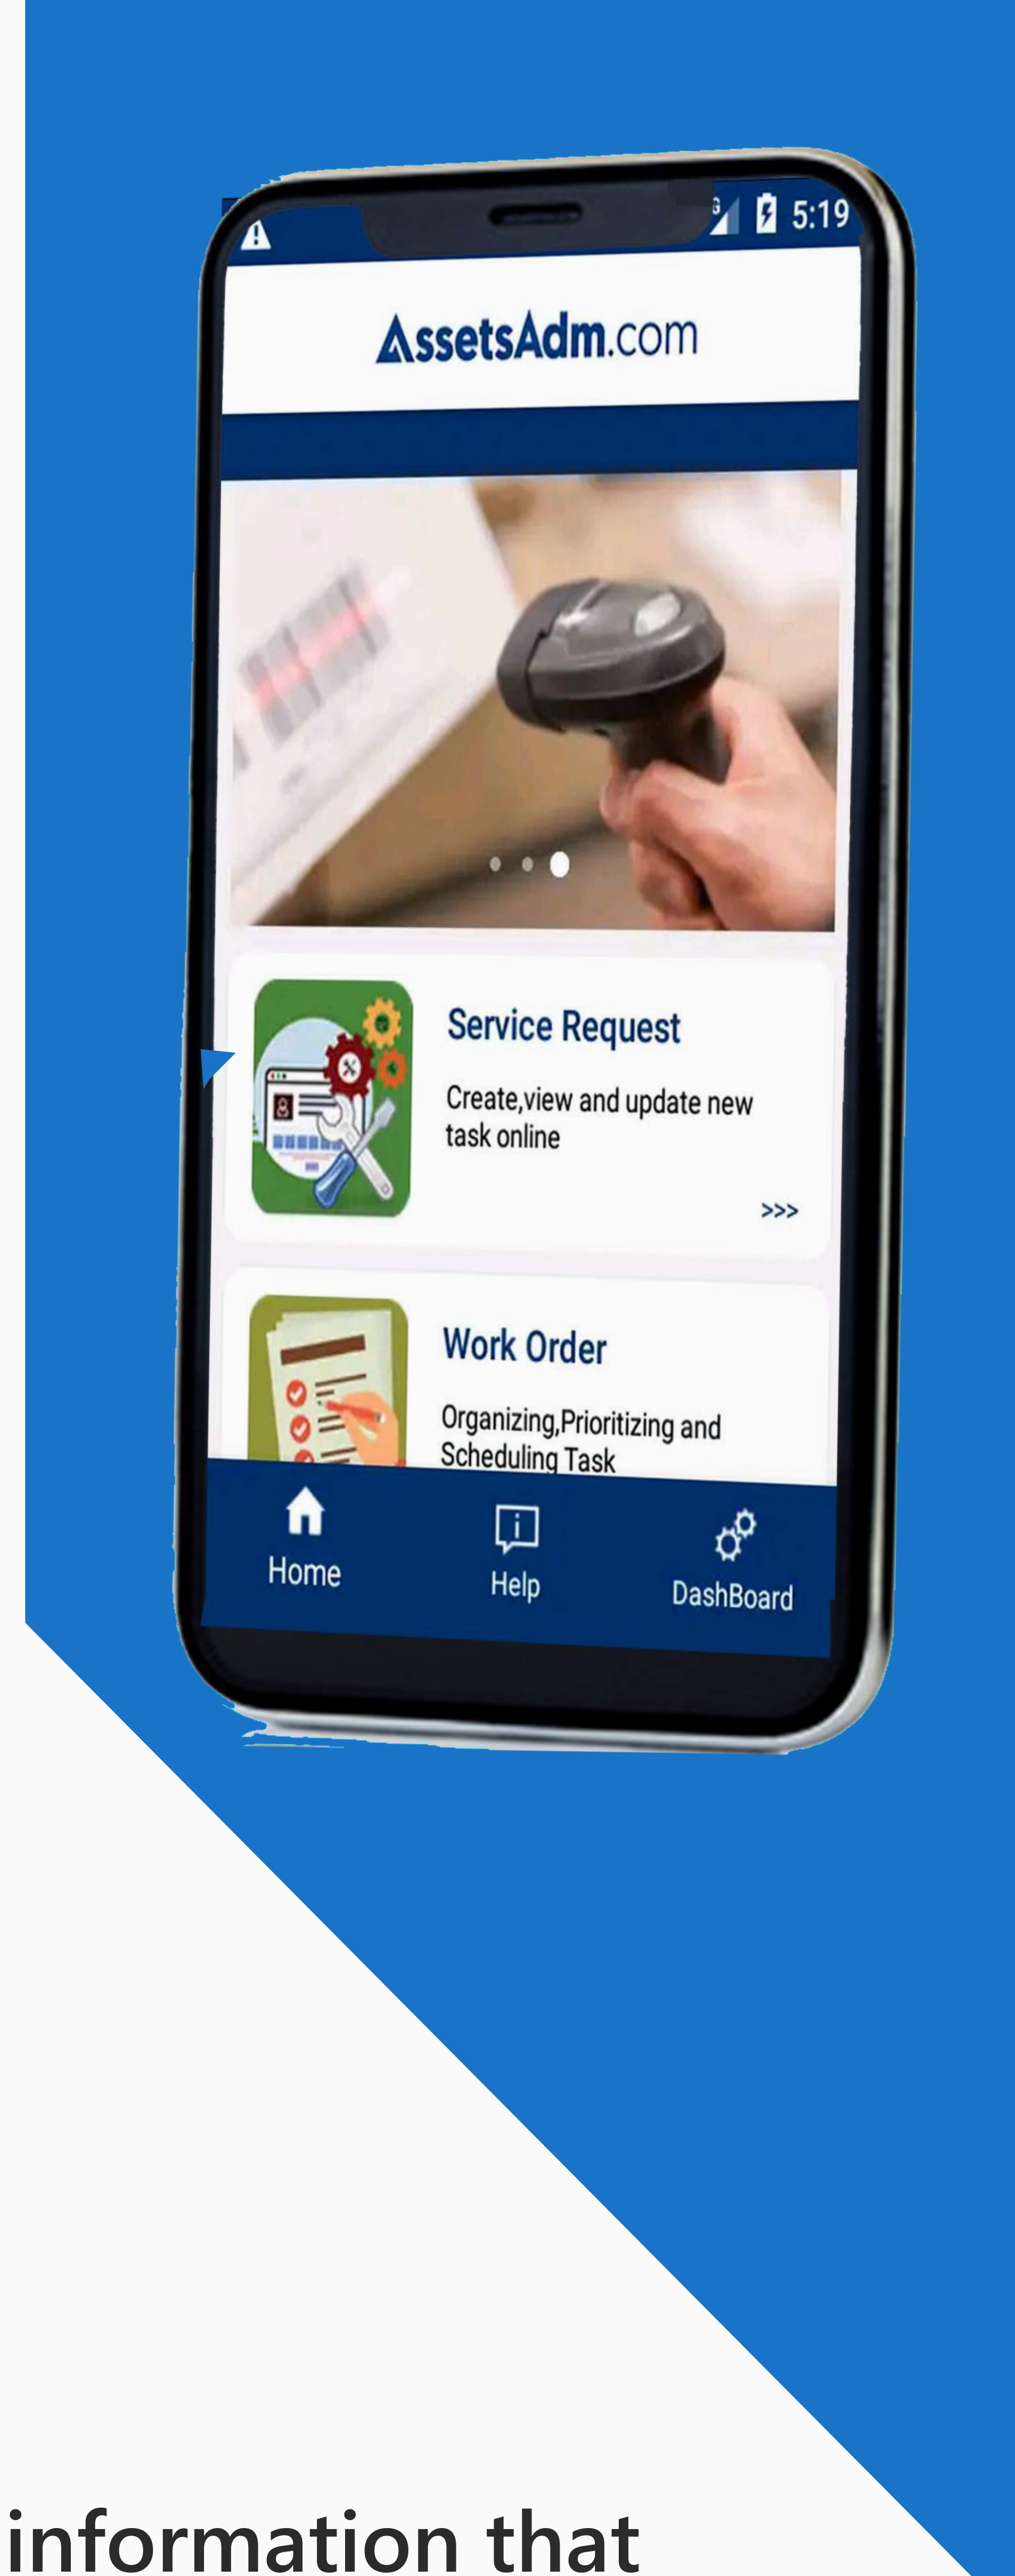

# AssetsAdm at your Fingertips

Mobile is everywhere and it is lot closer than desktop, AssetsADM Mobile app will help users and service technicians to update about the work, create new service request, work order and quick reports.

And also, to get Instant notification of scheduled preventive maintenance tasks and provides access to timely, relevant, and accurate information, notifications and master data details.

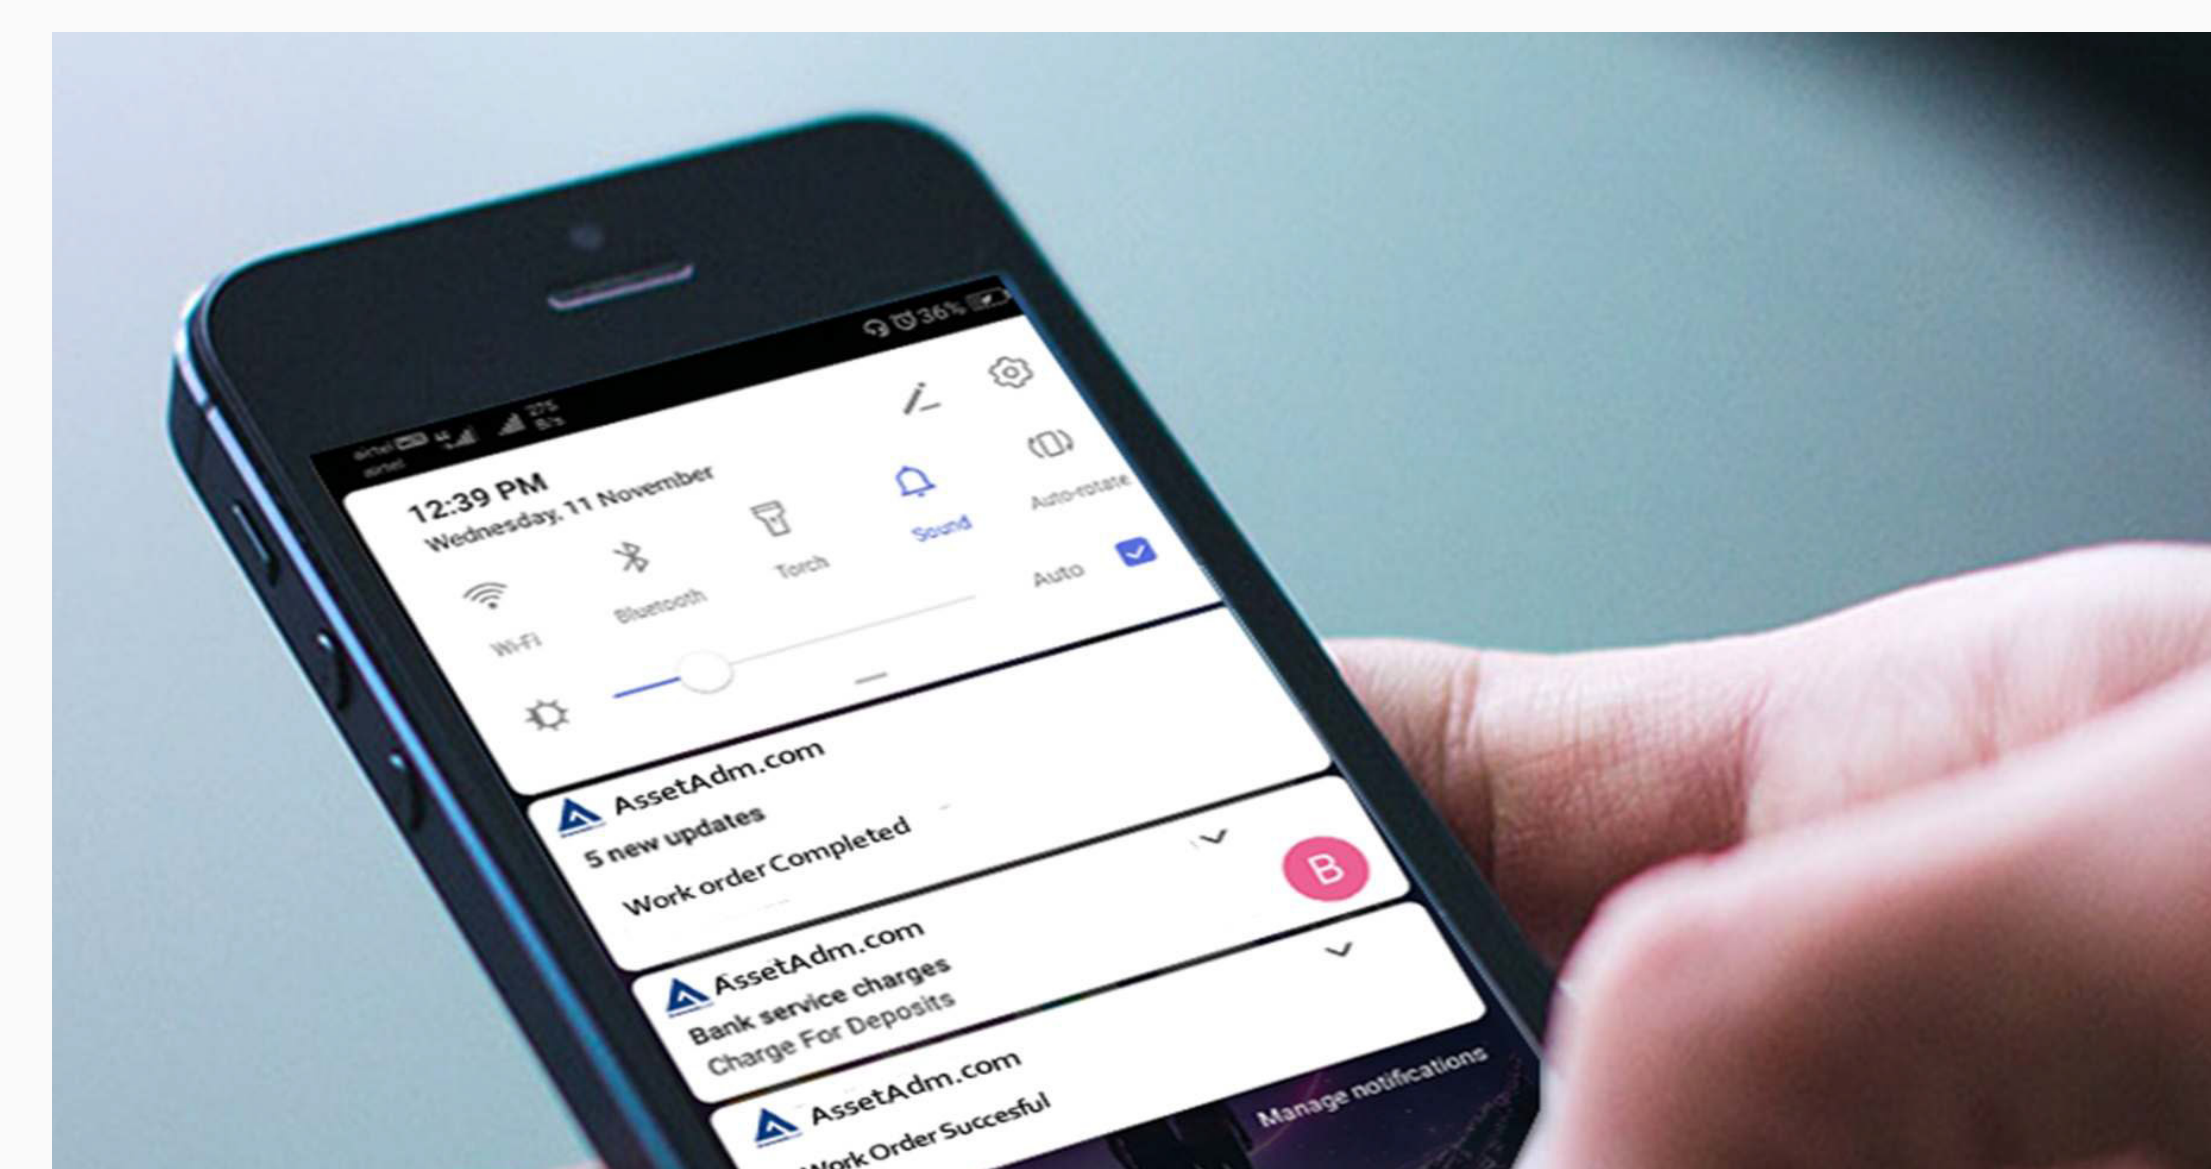

Application is both android and iOS supported, not only technicians also asset manager, asset users, custodians and important members of the organisation.

## Alerts and Notifications

Alerting makes it possible for employee to keep up with the information that matters most to them like as below.

- Send out breakdown alerts using email, SMS or mobile push notifications
- Update all users in the support group or only the assignee whenever a ticket gets updated
- Notify users when a service request or work order is closed with an option to send a confirmation code for ticket closure.
- Reminders and escalations based on the ticket types and priorities as per the organization's SLAs.

## Powerful Dashboard and KPI Reports

Dashboard are a great way of communicating insights visually, with smartly designed dashboards and KPI Reports for maintenance managers it provides an efficient way to look into how work is progressing relative to specific objectives and for users to get instant information of assets and tasks

## Analytics and Reports

AssetsAdm.com generates reports to get insights for managing and maintaining Assets of the organisation with eye catching graphical representations based on different parameters.

Filtering and sorting facilities help in accessing the data quicker and at our comfort.
